

# 一. 项目

主要完成的功能需要包含Better-Scroll实现页面中拖动滚动、拉动属性等功能

<https://ustbhuangyi.github.io/better-scroll/doc/zh-hans/>

```
1 //html
2 <div class="kerwin" >
3   <ul >
4     <li v-for="item in datalist">{{item}}</li>
5   </ul>
6   <div class="loading-wrapper"></div>
7 </div>
8
9 //js
10 import BScroll from 'better-scroll'
11 this.$nextTick(()=>{
12   var myscroll = new BScroll('.kerwin',
13     {
14     pullDownRefresh: {
15       threshold: 50,
16       stop: 20
17     },
18     scrollbar: {
19       fade: true,
20       interactive: false // 1.8.0 新增
21     },
22     pullUpLoad: {
23       threshold: 50
24     }
25   })
26   myscroll.on('pullingDown',()=>{
27     console.log("下拉了")
28     setTimeout(() => {
29       myscroll.finishPullDown() // 自动调用 .refresh()
30     }, 1000)
31   })
```

```
32 myscroll.on('pullingUp',()=>{
33   console.log("到底了")
34   setTimeout(() => {
35     myscroll.finishPullUp() // 自动调用 .refresh()
36   }, 1000)
37 })
38 })
39
40 //css
41 .kerwin{
42   height: 300px; //设置高度
43   overflow:hidden; //溢出隐藏
44   position: relative; //修正滚动条位置
45 }
46
```
